

THERMAL SYSTEMS

# WEBINAR

## Connectivity – Communication interfaces in SMT production

Oktober 26, 2023 at 9.00 a.m. and 4.00 p.m.

Industry 4.0 is based on intelligent, digitally networked systems that enable largely self-organized and flexible production. Standardization and smart software solutions help to achieve this.

„The Hermes Standard (IPC-HERMES-9852) ensures that important assembly information is transmitted reliably, spontaneously, simply and completely from machine to machine and to higher-level systems. With the CFX interface (IPC-CFX), communication is network-based vertical and is used for data upload and download as well as data analysis. The combination of horizontal Hermes communication and vertical CFX communication is absolutely essential for the smart factory in the long term and represents a further step towards standardization.

October 26, 2023 at 9:00 a.m. CET (for Asia, Europe, ROW)  
October 26, 2023 at 4:00 p.m. CET (for Americas, Europe)

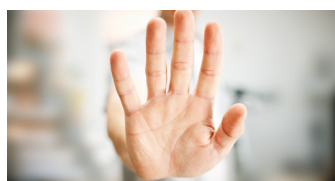

Register at [i.haug@rehm-group.com](mailto:i.haug@rehm-group.com)

Duration: 60 Min.

### Main topics of the webinar

- Horizontal and vertical communication in SMT production
- Assembly group indication
- Complexity of line control
- The Hermes Standard in detail
- CFX - how does it work?
- Possibilities with Rehm

*Subject to adjustments in content*
